Reimbursement Policy ID: RPC.0112.5420

Recent review date: 01/2026

Next review date: 09/2026

Healthy DC reimbursement policies and their resulting edits are based on guidelines from established industry sources, such as the Centers for Medicare and Medicaid Services (CMS), the American Medical Association (AMA), state and federal regulatory agencies, and medical specialty professional societies. Reimbursement policies are intended as a general reference and do not constitute a contract or other guarantee of payment. Healthy DC may use reasonable discretion in interpreting and applying its policies to services provided in a particular case and may modify its policies at any time.

In making claim payment determinations, the health plan also uses coding terminology and methodologies based on accepted industry standards, including Current Procedural Terminology (CPT); the Healthcare Common Procedure Coding System (HCPCS); and the International Classification of Diseases, 10th Revision, Clinical Modification (ICD-10-CM), and other relevant sources. Other factors that may affect payment include medical record documentation, legislative or regulatory mandates, a provider's contract, a member's eligibility in receiving covered services, submission of clean claims, other health plan policies, and other relevant factors. These factors may supplement, modify, or in some cases supersede reimbursement policies.

This reimbursement policy applies to all health care services billed on a CMS-1500 form or its electronic equivalent, or when billed on a UB-04 form or its electronic equivalent.

To the extent that any procedure and/or diagnosis codes are specified in this policy, such inclusion is provided for reference purposes only, may not be all inclusive, and is not intended to serve as billing instructions. Listing of a code in this policy does not imply that the service described by the code is a covered or non-covered health service. Benefit coverage for health services is determined by federal, state, or contractual requirements and applicable laws that may require coverage for a specific service. The inclusion of a code does not imply any right to reimbursement or guarantee claim payment. Other Policies and Guidelines may apply.

Policy Overview

Policy addresses billing and/or payment of certain dermatology procedures, including actinotherapy and photochemotherapy, lesion removal and laser treatment of psoriasis.

Exceptions

Cosmetic procedures are not reimbursable.

Reimbursement Guidelines

Healthy DC covers actinotherapy, photochemotherapy and laser treatment of psoriasis for the treatment of certain skin conditions, or cancers, when such treatment is recommended by the member's physician. All procedures discussed in this policy must be reported with the correct modifier, if applicable, including any/all anatomical modifiers for reimbursement.

Actinotherapy

Actinotherapy (ultraviolet light) (96900) may be reimbursed when submitted with a covered diagnosis code. Per this policy, certain diagnoses are appropriate indications for actinotherapy including but not limited to acne, atopic dermatitis, and psoriasis. Claims submitted for actinotherapy billed without an appropriate diagnosis will be denied.

Examples of appropriate diagnosis for actinotherapy

- Acne (ICD-10 codes L70.0-L70.1, L70.3-L70.9, L73.0)
- Atopic dermatitis (ICD-10 codes L20.0, L20.81-L20.82, L20.84-L20.9)
- Psoriasis (ICD-10 codes L40.0-L40.1, L40.3-L40.4, L40.8-L40.9)

Photochemotherapy

According to the American Academy of Dermatology Association and our policy, there are numerous diagnoses that are appropriate indications for 96910-96912 (photochemotherapy; PUVA) including, but not limited to atopic dermatitis, lichen planus, psoriasis, and vitiligo. Photochemotherapy codes are not considered to be billable services unless one of the appropriate diagnoses is reported.

Examples of appropriate diagnoses for photochemotherapy:

- Atopic dermatitis (ICD-10 codes L20-L20.9)
- Lichen planus (ICD-10 codes L43-L43.9)
- Psoriasis (ICD-10 codes L40-L40.9)
- Vitiligo (ICD-10 codes L80)

Laser Treatment of Psoriasis

According to the AMA CPT Manual and American Academy of Dermatology Association, laser treatment of psoriasis (96920-96922) should only be reported with a diagnosis of psoriasis (ICD-10 codes L40.0-L40.4, L40.8-L40.9) or parapsoriasis (ICD-10 codes L41-L41.9) in order to be eligible for reimbursement. Claims submitted without a covered diagnosis will not be reimbursed.

In addition, laser treatment of psoriasis (96920-96922) should not be reported more than once in two days as there should be a minimum of 48 hours between treatments.

Skin lesion(s)

Skin lesion removal is a procedure to remove growths from the skin, which can be done for a variety of reasons, including discomfort, size, or potential for cancer. Below are the covered CPT codes for lesion removals.

- Lesion removal; malignant and pre-malignant lesion by any method; includes simple repair and local anesthesia (11600-11646, 17000-17004).
- Lesion removal; symptomatic benign lesions by any method; includes simple repair and local anesthesia (11400-11471, 17110, 17111). The following are examples of benign lesions: sebaceous cysts, skin tags, milia, nevi (moles), acquired hyperkeratosis (keratoderma), papilloma, hemangiomas, viral warts. Removal of benign skin lesions is considered cosmetic, except when there are signs or symptoms that make removal medically necessary.

Excision(s)

Excisional lesion removals are categorized by type, benign (CPT 11400-11471) or malignant (CPT 11600-11646), body area (e.g., trunk, arms, legs) and size in centimeters. Excisions include margins and single layer closure using sutures, chemical, or electrocautery. Excision codes are used to reflect “full thickness” (through dermis) removal of a lesion. Refer to the CPT Manual for instructions on correct coding (procedure codes and modifiers) of specifics such as lesion size, body area, complexity, and associated procedures such as suturing.

Shaving

Removal of epidermal or dermal skin growths by shaving (CPT 11300-11313) does not require suturing. Control of bleeding by chemical or electrical cauterization is included in these codes and not separately reimbursable.

Debridement

Debridement (CPT codes 11000-11044) is a surgical excision to remove dead, damaged or contaminated skin not associated with fractures or dislocations (see CPT codes 11010-11012).

Wound repairs

Wound repairs are categorized into three types of repairs (simple, intermediate, or complex), body area (e.g., scalp, neck, extremities) and length in centimeters. Simple repairs (12001-12021) include superficial lacerations and minor repairs. Intermediate repairs include deeper or more complex lacerations with deep subcutaneous or layered repairs.

Biopsy

Biopsy codes (11102-11107) may be reimbursable when the procedure is performed for the specific purpose of obtaining tissue samples for diagnostic examination. The physician removes a biopsy sample of skin or subcutaneous tissue for the purpose of performing a diagnostic histopathologic study under a microscope.

Biopsies performed on separate sites or separate lesions on the same date of service may be separately reimbursable but must be reported with only one primary biopsy code regardless of how many different techniques are used when performed on the same lesion and during the same session.

Separately identifiable evaluation and management services may be reimbursable if they are above and beyond the pre- and post-operative work of the procedure and are performed by the same physician on the same day as a covered minor surgical service is performed.

Multiple Procedures payment reduction

Healthy DC reimburses multiple dermatology procedures by paying the highest valued procedure at 100% of the fee schedule or contracted rate, and the second through fifth procedures at 50% of the fee schedule or contracted rate. Modifier 51 must be reported to receive payment for more than one procedure performed on the same date of service and by the same physician. Add-on codes are not subject to payment reduction.

The following services are bundled into the payment for the primary procedure performed:

- Anesthesia when provided by the surgeon or dermatologist, including conscious sedation.
- Simple closures when performed in conjunction with another procedure.
- Miscellaneous supplies (e.g., surgical trays).
- Evaluation and management services.

Minor Surgical Procedures

A minor surgical procedure is a procedure with a 0- or 10-day global period. The global period for a surgical procedure considers services routinely performed by the surgeon or by members of the same group with the

same specialty during the preoperative, intra-operative, and post-operative time periods. Claims for services considered to be directly related to the pre-procedure, intra-procedure, and post-procedure work are included in the global reimbursement and will not be paid separately. Minor surgical procedures are not separately reimbursable as an evaluation and management service. However, if a significant and separately identifiable evaluation and management service unrelated to the decision to perform the minor surgical procedure is documented and unrelated to the decision to perform the minor surgical procedure, appropriate modifier is required.

If a minor surgical procedure is performed on a new patient, the same rules for reporting evaluation and management services apply. The fact that the patient is “new” to the provider is not sufficient alone to justify reporting an evaluation and management service on the same date of service as a minor surgical procedure. NCCI contains many, but not all, possible edits based on these principles. Both the medically necessary minor surgical procedure and the evaluation and management service must be appropriately and sufficiently documented by the provider in the member’s medical record to support the claim for these services, even though the documentation is not required to be submitted with the claim.

Please check with Healthy DC website for any prior authorization requirements.

Definitions

Actinotherapy

A medical treatment that uses chemically active rays from the electromagnetic spectrum, such as X-rays or ultraviolet light, for therapeutic purposes. Ultraviolet light can be used to treat dermatological conditions like acne, eczema, and psoriasis, while infrared radiation can be used to treat muscle pain.

Photochemotherapy

Also known as PUVA, is a treatment that uses ultraviolet radiation and photosensitizing compounds to treat a variety of skin diseases including psoriasis, vitiligo, mycosis fungoides, alopecia areata, dyshidrotic eczema, and atopic dermatitis.
