Subject: HEDIS® Telehealth Tips

Did you know you can close your enrollee care gaps and meet the National Committee for Quality Assurance (NCQA's) HEDIS® guidelines by utilizing telehealth visits for your enrollees?

Telehealth visits can capture the following HEDIS® measures when you apply the appropriate modifiers or place of service codes: Controlling High Blood Pressure (CBP), Comprehensive Diabetes Care (CDC), Care for Older Adults (COA), Prenatal and Postpartum Care (PPC), Weight Assessment Counseling for Nutrition and Physical Activity for Children/Adolescents (WCC), Child and Adolescent Well-Care Visits (WCV), Well-Child Visits in the First 30 Months of Life (W30), and Transitions of Care (TRC).

Telephone visits can help close HEDIS® gaps for CBP, CDC, and TRC.

Enrollee reported height, weight, and blood pressure readings are now acceptable for many HEDIS® measures if the information is collected by a primary care practitioner or specialist, or if the specialist is providing a primary care service related to the condition being assessed, while taking a patient's history. **The information must be recorded, dated and maintained in the enrollee's legal health record.**

	Place of Service	CPT Modifier	Description	CPT Codes
Telehealth	2	GT 95	Via interactive audio and video telecommunication systems. Synchronous, telemedicine service rendering via a real-time interactive audio and video telecommunication system.
